

Factsheet SnapFlux for SAP

SnapFlux for SAP: Service-oriented architecture for standardised integration of market data in SAP.

The rapid changes and growing complexity of financial markets are increasingly influencing company results, particularly in the area of currency and interest rate transactions. Effective solutions are needed enabling precise analysis of currency and interest rate transactions while ensuring a constant supply of powerful market data.

A daily provision of financial information and the seamless integration into SAP are essential requirements in order to achieve sustainable competitive advantage. Thanks to SnapFlux for SAP we can satisfy these needs.

With SnapFlux for SAP companies are enabled to integrate all financial information in SAP R/3 in unsurpassed quality, automatically and with varying frequencies.

The solution: SnapFlux for SAP.

Customised market data – simple, secure and cost optimised – enhancing the quality of your systems.

We developed a special XML-based interface that automatically provides current financial market data for SAP R/3 from various sources (Thomson Reuters, European Central Bank, numerous Landesbanks, etc.).

Whether exchange rates, interest rates, forwards or swaps, you can select the data you need individually from all available instruments. Depending on the scope of data you can compare for example the 32 leading global currencies against the EUR and/or USD directly. Of course, you can also compare all 160 global currencies and cross-compare any of them.

Advantages at a glance:

- Tailored customisable financial market information
- Secure, automated Web-based data transfer
- Updates according to your schedule (32x/day max.)
- Improved data quality
- Fewer errors/elimination of manual entry of data and process flows
- Simple and fast integration
- Central helpdesk and support
- Guaranteed availability of historical data

Linking business and IT. For maximum business performance.

oraïse - all advantages from a single source. We assist in choosing the financial information you need, integrating data and operating systems. Our jointly-developed solution concept is quick and easy to set up – and we accompany you from the beginning!

The first step is selecting the financial information and currencies relevant to your business in an "instrument list".

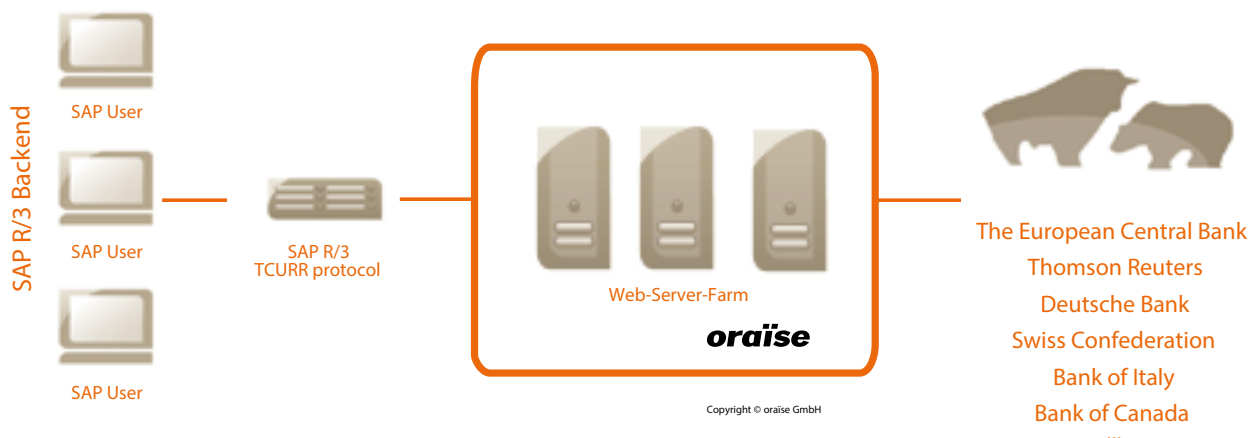

In a second step we prepare the initial provision of the instrument list in our server farm while we simultaneously implement our interface in SAP and configure it according to your specific requirements.

Benefit from our infrastructure with increased availability and reliability. Our systems are permanently maintained and optimised within the scope of our quality assurance, allowing us to guarantee users consistently high performance levels. Manual data entries on the client side are omitted, the data quality is improved and productivity increases.

To use our solution concept no additional hardware or software has to be installed. The only requirement is an Internet access and SAP R/3 (release 4.6 B or higher).

Are you Interested? Test our solution for up to four weeks in a free trial. Please contact us for a personalised consultation.
