

# FXT Companion

**Refinitiv FXT: the new trading application for the foreign exchange market.  
oraïse provides the right solution for the infrastructure and operation of the platform.**

FXT is the new Refinitiv FX trading solution, replacing the well-known Dealing System, thereby leading to profound changes in the presentation of the dedicated hardware infrastructure. For a smooth transition, oraïse offers a solution tailored to customer requirements, ensuring both trade operation, as well as integration into bank internal systems, including post-trade processing.

FXT Companion. A tailor-made solution by oraïse  
customised, safe and reliable

oraïse supports you in all specific issues that arise during the migration to a full integration of the FXT functionality in Eikon. We offer targeted assistance, with years of experience in the currency market.

## **FXT Companion - Advantages at a glance**

- Extensive experience in the FX market and related technologies
- Modular service model for a customised solution
- Management of all aspects together with Refinitiv
- Connection via Internet or Direct Delivery
- Integration into existing Dealing-Network and optimisation of the infrastructure
- Parallel use of Dealing and FXT during migration phase
- Remote monitoring, update service and operation - "Carefree"

## **oraïse supports you during the migration and operation**

The oraïse infrastructure services can be commissioned directly or ordered at Refinitiv. In full, the services include the following elements:

- Hardware leasing option for clients, servers and infrastructure components
- Migration support
- Project management
- Integration service
- Operation of Dealing Communication Appliance with required interfaces (Feed Handler) and remote maintenance option
- Pro-active update service for the FXT application
- Patch Management for Microsoft Windows clients, and anti-virus protection
- Eikon operation on FXT client including update service

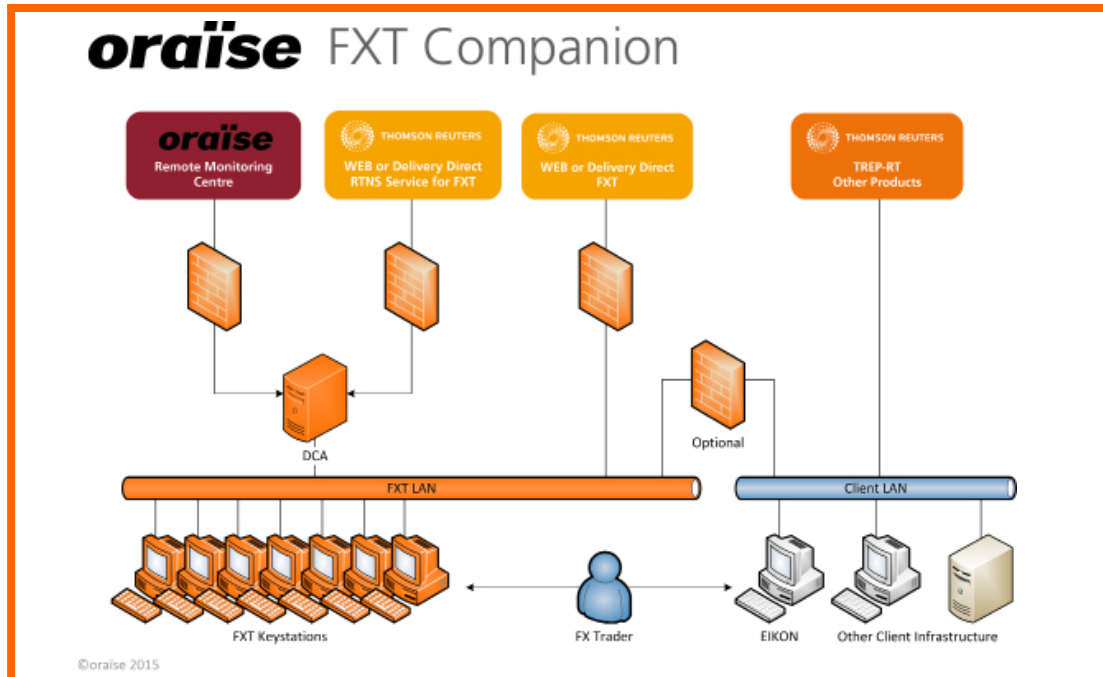

## **Infrastructure**

The core component of the infrastructure is the Dealing Communication Appliance (DCA), which is integrated into the existing customer transaction network. It can be addressed by both the existing Dealing 3000, as well as the newer FXT components. In order to provide all trading processes through a centralised and failsafe server instance, the necessary adapters (Feed Handler), for example Ticket Printing and Ticket Output Feed, are operated on the DCA. In addition to domain services for the administration of associated FXT clients, a comprehensive update and patch management is provided. The update and patch management serves both the Refinitiv software, as well as the necessary operating system updates and anti-virus protection, which are initiated via the DCA. With the remote maintenance option via a secure Internet connection, our specialists access the systems in case of failure or for coordinated processes for maintenance.

## Clients

It is possible to use of the integrated fat clients FXT terminals during the migration phase with the currently-used Dealing environment. For a successful conversion, oraise ensures that all necessary aspects concerning Refinitiv are considered. On the request of the customer, the FXT clients enable a parallel operation of the Eikon application without any loss of performance. The latest FXT releases are tested on the reference system and included in the update services once per quarter. The releases are securely distributed, by agreement with the customer, onto the trader's workstations. In addition a connection to various video switch systems (e.g. WEY) is ensured.

## Solution overview

## About oraise

With the ISO 27001 certification of our operational and organisational departments responsible for the delivery of IT services, we ensure full compliance and are able to offer outsourcing services for essential business processes. Our forward-looking solutions enable financial institutions, exchanges, stockbrokers and treasury departments to use information technology in the front office more efficiently, more flexibly and ultimately, to make your business more competitive.

With more than 25 years of experience in financial markets, we offer a service portfolio covering consulting services, software development and implementation, operations and support. Extensive knowledge in processes and structures of financial enterprises combined with profound technical expertise enables oraise to deliver innovative and forward-looking solutions. Be it software or system development, integration implementation or operation of trading-, market data or front office systems – the focus of oraise is on creating customer value i.e. improved business processes, reduced costs and empowerment of competitive edge.

oraise is an owner-managed company with presences in Germany and Switzerland at several locations including the well-known financial centres.
